Reason for Allowance

 Applicant's arguments filed 9/16/08 (on pages 8,9 of the response) with respect to claims 1-3,6,7,9-15,17-20 have been fully considered and are persuasive. The rejection of the claims has been withdrawn from the previous office action and the claims 1-3,6,7,9-15,17-20 are allowed.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter:
The present invention relates generally to a manner by which to facilitate call placement by a user of a mobile node to a service center, such as an emergency dispatch center or a directory-service center, identifiable by a user by a short dialing code.. More particularly, the present invention relates to apparatus and an associated method, by which to broadcast, or otherwise deliver, short codes, used in a network with which the mobile node is registered, to the mobile node, wherein the delivered short dialing codes are associated with short dialing codes normally used by the user to identify the service center.

The apparatus and method further comprises:

an application server having a database wherein area-dependent short dialing codes for
a plurality of service centers are stored and wherein a plurality of mnemonics that
identify names associated with short dialing codes are stored, the application server
storing each mnemonic for a short dialing code in a plurality of different languages;

 a network-positioned code-delivery detector adapted to receive from the application server an area-dependent short dialing code for the selected service center and to receive from the application server, the mnemonic, in a plurality of different languages, that identifies the name associated with the short dialing code received from the application server,

- an identifier-code broadcast scheduler coupled to said network-positioned codedelivery detector to receive the area-dependent short dialing code and the mnemonic in the plurality of different languages, said identifier-code broadcast scheduler for scheduling the broadcast of the area-dependent short dialing code and the received mnemonic in the plurality of different languages throughout areas encompassed by the network part, said broadcast being upon a cell broadcast channel associated with the network part for delivery to a mobile node, the area-dependent short dialing code and mnemonic in the plurality of different languages when delivered thereto, for being indexed together with permanently stored values maintained at the mobile node.

The prior art references individually or in combination fails to render the above underlined unique feature obvious. Therefore the claims 1-3,6,7,9-15,17-20 are allowed.
